

- **Proof Statement**

I am a third-year Computer Science student focused on backend software development using Java. Through my academic projects, internships, hackathons, and continuous learning, I am developing practical software engineering skills and understanding how backend systems are designed and built. This portfolio is intended for campus placement interviewers and recruiters hiring Java and backend developer interns or entry-level developers. My goal is to provide evidence of my technical growth and project experience and encourage them to invite me for an interview.

- **Why**

My resume lists my projects and skills, but this portfolio demonstrates how I think, learn, and apply them to real software problems.
