

Act as an experienced software engineering recruiter reviewing entry-level candidates. I have uploaded my portfolio sitemap.

My goal: I want recruiters to quickly understand that I am a 3rd-year Computer Science student interested in Java, backend development, and web development, with hands-on experience through projects, internships, and hackathons.

Please review my sitemap and evaluate:

1. Is the flow logical from landing on the portfolio to contacting me?
2. Does it clearly communicate who I am and what I can do?
3. Are there any unnecessary pages or missing sections?
4. Which parts would recruiters care about the most?
5. What would you improve to make the portfolio stronger for internship and entry-level software engineering roles?

Please give:

6. What works well
7. What should be improved
8. The changes you recommend
9. A final rating out of 10 with a short explanation

Looking at this like a recruiter who spends maybe 60-90 seconds on a portfolio before deciding whether to dig deeper — here's my honest take.

1. Is the flow logical?

Mostly yes, but the order is slightly off for how recruiters actually scan a portfolio. Right now it's:

About Me → Projects → Experience → Skills → Achievements → Contact

Recruiters generally want to answer "can this person do the job" as fast as possible. That means **Skills** and **Experience** should come earlier — right after About Me, before Projects — because Projects only make sense once the recruiter knows what stack you're working in. As it stands, someone hits "Featured Projects" before they even know you know Java or SQL.

A stronger flow:

About Me → Skills → Experience → Projects → Achievements → Contact

2. Does it clearly communicate who you are and what you can do?

Reasonably well. "About Me" has Introduction, Career Goal, and Future Interests — that's good, it tells recruiters your target role (Java Developer / Backend Engineer) right away. That's important; a lot of student portfolios bury this.

One gap: nowhere in the sitemap do I see a clear one-line "elevator pitch" node — something like a hero/tagline on the homepage itself ("3rd-year CS student building backend systems with Java, Python, and SQL"). If Home just leads into a menu with no summary, recruiters have to click into About Me to get the pitch, which is one click too many.

3. Unnecessary or missing sections?

Unnecessary / questionable:

- "Future Interests: Quantum Computing, Web3" — for a Java/backend-focused portfolio, this could actually work against you. Recruiters hiring for backend roles may wonder if you're focused or scattered. If you keep it, keep it very brief and clearly separate from your core goal.
- Having both "Featured Projects" and "Internship Projects" and "Hackathon Projects" as separate categories under Projects might over-fragment things. A recruiter has to click three times to see all your work.

Missing:

- **Resume download/link** — this is honestly the biggest gap. Recruiters often want a PDF resume they can save or forward internally, not just a sitemap to click through. I don't see this anywhere.
- **Education details** (college, CGPA, relevant coursework) — I see "NMIMS MPSTME" mentioned in Introduction, but no dedicated place for CGPA/coursework, which recruiters do check for entry-level roles.
- **Tech stack tags on individual projects** — not visible from the sitemap alone, but make sure each project page states the stack used (e.g., "Java, Spring Boot, MySQL") right at the top.

4. What recruiters care about most

In order of attention, honestly:

1. **Skills** (do they know the stack we need — Java, SQL, REST APIs — yes, good, these are here)
2. **Experience** (FlyRank AI Internship is your strongest credential — this should be very visible, maybe even mentioned on the homepage)
3. **Projects** (they'll skim titles and stacks, rarely read deep descriptions unless intrigued)
4. **Contact info** (LinkedIn + GitHub matter more than email for a first check)

Your **FlyRank internship** is genuinely valuable — most 3rd-years don't have a named internship. Don't let it get buried three clicks deep under "Experience." Consider surfacing it on the homepage or About Me directly.

5. What I'd improve

- Reorder navigation: Skills and Experience before Projects
- Add a resume download as its own top-level or homepage element
- Add a short tagline/summary visible from Home, not just inside About Me
- Merge project subcategories where possible, or clearly label which 2-3 are your "best" so recruiters don't have to guess
- Reconsider "Future Interests" placement — fine as a small note, not a big highlighted section
- Add CGPA/coursework under About Me if it's decent — recruiters do check this for entry-level screening

What works well

- Clear career goal stated early (Java Developer / Backend Engineer)
- Good project diversity (autonomous systems, AI ranking, disease detection) — shows range
- Contact section has all three essentials: email, LinkedIn, GitHub
- Skills are well organized by category (Languages, Web, Backend/DB, Tools)
- Internship + hackathons + academy experience shows initiative beyond just coursework

Final Rating: 7/10

The content is genuinely strong for a 3rd-year — real internship, varied projects, clear skill categorization. What's holding it back from an 8-9 is information architecture: the most recruiter-relevant info (skills, internship) is positioned after less critical content (projects), and there's no resume or homepage summary to anchor a fast scan. These are structural fixes, not content problems — you have the substance, it just needs to be surfaced in the order recruiters actually look for it.

Want me to help you redesign the navigation order or draft that homepage tagline/summary?
